Question –

If average inventory is ₹ 1,25,000 and closing inventory is ₹ 10,000 less than opening inventory then the value of closing inventory will be

Option A - ₹ 1,35,000

Option B - ₹ 1,15,000

Option C - ₹ 1,30,000

Option D - ₹ 1,20,000

Answer – D

Reasoning –

Formula: Average Inventory = (Opening Inventory + Closing Inventory) / 2

Let Opening Inventory = X. Then Closing Inventory = X - 10,000

Calculation: $1,25,000 = (X + X - 10,000) / 2$

$2,50,000 = 2X - 10,000.$

$2,60,000 = 2X.$

X Opening = 1,30,000. Closing = 1,30,000 - 10,000 = 1,20,000

Sample No – 3

Sub-domain – Core Accountancy

Question –

यदि औसत इन्वेंटरी ₹१,२५,००० है और समापन इन्वेंटरी, उद्घाटन इन्वेंटरी से ₹१०,००० कम है, तो समापन इन्वेंटरी का मूल्य क्या होगा?

Option A - ₹ १,३५,०००

Option B - ₹ १,१५,०००

Option C - ₹ १,३०,०००

Option D - ₹ १,२०,०००

Answer – घ

Reasoning –

सूत्र: औसत इन्वेंटरी = (उद्घाटन इन्वेंटरी + समापन इन्वेंटरी) / २। मान लें उद्घाटन इन्वेंटरी = X। तब

समापन इन्वेंटरी = X - ₹१०,०००। गणना: ₹१,२५,००० = (X + X - ₹१०,०००) / २। ₹२,५०,००० = २X -

₹१०,०००। ₹२,६०,००० = २X। X उद्घाटन = ₹१,३०,०००। समापन = ₹१,३०,००० - ₹१०,००० =

₹१,२०,०००।

Question –

યદિ ગડ્ડ ઇનઝેન્ટરિ ₹૧,૨૫,૦૦૦ હય્ એવં સમાપની ઇનઝેન્ટરિ ઉદ્ધોધની ઇનઝેન્ટરિર (થેકે ₹૧૦,૦૦૦ કમ્ હય, તવે સમાપની ઇનઝેન્ટરિર મૂલ્ય કત્ હવે?

Option A - ₹ ૧,૭૫,૦૦૦

Option B - ₹ ૧,૧૫,૦૦૦

Option C - ₹ ૧,૭૦,૦૦૦

Option D - ₹ ૧,૨૦,૦૦૦

Answer – ઘ

Reasoning –

સૂત્ર: ગડ્ડ ઇનઝેન્ટરિ = (ઉદ્ધોધની ઇનઝેન્ટરિ + સમાપની ઇનઝેન્ટરિ) / ૨ | ધરા યાક ઉદ્ધોધની ઇનઝેન્ટરિ =

X | તવે સમાપની ઇનઝેન્ટરિ = X - ₹૧૦,૦૦૦ | હિસાબ: ₹૧,૨૫,૦૦૦ = (X + X - ₹૧૦,૦૦૦) / ૨ |

₹૨,૫૦,૦૦૦ = ૨X - ₹૧૦,૦૦૦ | ₹૨,૬૦,૦૦૦ = ૨X | X ઉદ્ધોધની = ₹૧,૩૦,૦૦૦ | સમાપની =

₹૧,૩૦,૦૦૦ - ₹૧૦,૦૦૦ = ₹૧,૨૦,૦૦૦ |

Sample No – 3

Language – English

Domain – Partnership Accounts

Sub-domain – B. Com

Question –

X and Y are partners in a company with a capital of ₹1,80,000 and ₹2,00,000. Z was admitted for 1/3rd share in profits and brings ₹3,40,000 as capital. Calculate the amount of goodwill.

Option A - ₹ 2,40,000

Option B - ₹ 1,00,000

Option C - ₹ 1,50,000

Option D - ₹ 3,00,000

Answer – D

Reasoning –

1. Calculate the Total Capital of the firm based on Z's share:
Z brings for a share.

2. Calculate the Actual Combined Capital of all partners:
This is the sum of the capital of X, Y, and the new partner Z.

3. Calculate the Value of Goodwill:

Goodwill is the difference between the total capital based on the new partner and the actual combined capital.

Sample No – 665

Sub-domain – Fundamental Accountings

Question –

When opening stock 50,000; closing stock 40,000; purchases 1,90,000 profit margin is 16.67% on sales, the sales are:

Option A - 2,40,000

Option B - 2,36,000

Option C - 2,00,000

Option D – 2,44,000

Answer – B

Reasoning –

$GP = 16.67\% \text{ sales}$; $COGS = 50k + 190k - 40k = 2,00,000$; $Sales = 2,00,000 / (1 - 0.1667) = 2,36,000$.

Sample No – 668

Question –

Job rotation is recommended for _____ managers in almost all organizations.

Option A – Lower Level

Option B – Middle Level

Option C – Top Level

Option D – At all levels

Answer – B

Reasoning –

Job rotation is mainly recommended for middle-level managers to help them gain broad organizational experience, develop managerial skills, and prepare them for higher responsibilities.

Lower-level → rotation is limited and more task-specific

Top-level → usually specialize in strategic roles

All levels → not commonly practiced

Sub-domain – GST Laws

Question –

Assessable value of imported item is ₹2,00,000. BCD @10%, IGST @18%, and Social Welfare Surcharge @10% on BCD. Ignoring GST Compensation Cess, what is the total customs duty and IGST payable?

Option A – ₹59,960

Option B – ₹60,000

Option C – ₹62,000

Option D – ₹61,960

Answer – D

Reasoning –

BCD = ₹20,000 (10% of ₹2,00,000).

SWS = ₹2,000 (10% of BCD).

Subtotal = ₹2,22,000. IGST @18% = ₹39,960.

Total payable = ₹20,000 + ₹2,000 + ₹39,960 = ₹61,960.

Sample No – 2459

Language – English

Domain –

Sub-domain – Financial Mathematics

Question –

Divide rs. 2,760 in two parts such that simple interest on one part at 12.5% p.a for 2 years is equal to the simple interest on the other part at 12.5% p.a for 3 years.

Option A – Rs. 1600 and Rs. 1160

Option B – Rs. 1656 and Rs. 1104

Option C – Rs. 1700 and Rs. 1060

Option D – Rs. 1500 and Rs. 1260

Answer – D

Reasoning –

Step 1 Let the first part be P1 and the second part be P2

Step 2 Given total sum: $P1 + P2 = 2760$

Step 3 Simple interest on first part for 2 years = Simple interest on second part for 3 years
 $P1 \times 12.5 \times 2 / 100 = P2 \times 12.5 \times 3 / 100$

Step 4 Simplify $P1 \times 2 = P2 \times 3$, $2P1 = 3P2$, $P1 / P2 = 3 / 2$

Step 5 Let $P1 = 3x$, $P2 = 2x$

Step 6 Sum of parts $3x + 2x = 2760$, $5x = 2760$, $x = 552$

Step 7 Find the two parts $P1 = 3x = 3 \times 552 = 1656$, $P2 = 2x = 2 \times 552 = 1104$

Question –

If the publisher has to pay 761,200 as the printing cost for production of a certain quantity of books, then what will be the amount of royalty to be paid for these books?
Image –

Directions: Study the pie chart given below and answer Questions 71-75. It gives the breakup of expenses incurred in publishing a book.

- Option A – Rs. 22,950
Option B – Rs. 45,000
Option C – Rs. 45,900
Option D – Rs. 48,900

Answer – D

Reasoning –

The ratio between printing cost and royalty = 20:15 or 4:3. Let royalty be denoted by R.
Then $4 : 3 = 61,200 : R$
 $R \times 4 = 61,200 \times 3$
 $R = 61,200 \times \frac{3}{4} = \text{Rs. } 45,900$
